NARRATIVE REPORT

Name: Joshua M. Rabulan
Year and Course: 4F3 - BSIT
Topic: **Information Session on Stay Safe Online Cyber Security**
Speaker: Engr. John Erick G. Delos
Date and Time: October 22, 2025, 9:00 AM – 11:00 AM
Venue: Zoom

I. Introduction

On October 22, 2025, I attended an online information session about **Stay Safe Online: Cyber Security**, presented by **Engr. John Erick G. Delos**. The event was held through Zoom and was attended by BSIT students and other participants.
As technology improves, cyber threats also become more common. This made the topic very important, especially for IT students like me. The session aimed to teach us how to protect ourselves, our data, and our online accounts from hackers, scams, and other digital dangers.

II. Narration of Events

The session started at **9:00 AM**. Before the program officially began, participants were asked to join early, check their audio, and register using an attendance link.

Opening
The host welcomed everyone and introduced the speaker. They reminded us that cybersecurity is a responsibility shared by all users, not just technical experts.
Main Discussion
Engr. Delos discussed several important topics, including:

- **What cyber security is** and why it matters
- **Common online threats**, such as phishing, malware, fake websites, and identity theft
- **Password security**, like using strong and unique passwords
- **Two-factor authentication (2FA)** for added protection
- **Safe browsing practices** to avoid suspicious links or downloads
- **Protecting personal information** on social media
- **Recognizing online scams** and how to report them

He also shared real-life examples of cyberattacks and how victims were affected. These stories made me realize how serious and dangerous online threats can be.
Open Forum
Participants were given time to ask questions. Some asked about how to secure their devices and what to do when they suspect their account has been hacked. Engr. Delos answered clearly and gave practical advice.
Closing
The program ended around **11:00 AM** with a reminder to always stay alert and apply good cybersecurity habits in daily life.

III. Knowledge / Learning Acquired
From the session, I learned the following:

1. **Always use strong passwords** and avoid reusing them across different accounts.
2. **Enable two-factor authentication** on important accounts like email and banking.
3. **Think before clicking** — many cyberattacks begin with fake links or messages.
4. **Keep software and devices updated** to prevent vulnerabilities.
5. **Be careful with what you share online** because hackers use personal info to target victims.

6. **Cybersecurity requires awareness and discipline**, not just technical skill.

IV. Observation

The session was well-organized, and the speaker explained the concepts in simple and understandable terms. I noticed that many students were engaged, especially during the open forum. Even though the event was online, the flow was smooth, and the visuals used in the presentation were clear and helpful.

V. Recommendations / Suggestions
For future cybersecurity sessions, I suggest the following:

1. Include **hands-on demonstrations**, such as how to check for phishing emails.
2. Provide **sample scenarios** where students can practice identifying threats.
3. Add short **quizzes or interactive activities** to test understanding.
4. Invite experts to talk about **advanced cybersecurity tools**.
5. Share **free cybersecurity resources** that students can explore.
