NARRATIVE REPORT

Name: Joshua M. Rabulan
Year and Course: 4F3 - BSIT
Topic: **HTML HANDS-ON EXERCISE**
Speaker: Ms. Ethel Grace Verana
Date and Time: December 04 , 2025, 7:00 PM – 8:00 PM
Venue: Google Meet

I. Introduction

On December 4, 2025, I attended an online session on **HTML Hands-On Exercise** conducted by **Ms. Ethel Grace Verana**. The activity was held through Google Meet and was designed to help BSIT students practice the basics of creating a webpage using HTML. As an IT student, learning HTML is important because it is the foundation of web development. I joined the session eager to improve my skills and understand how HTML files work in real projects.

II. Narration of Events

The session started at exactly **7:00 PM**. Participants were welcomed by Ms. Verana, who began by explaining the objective of the activity: to apply HTML concepts through live demonstration and hands-on practice.

Introduction to HTML
Ms. Verana reviewed the basic parts of an HTML document, including:

- <!DOCTYPE html>
- <html>
- <head> and <title>
- <body>

She explained their functions and how they help structure a webpage.
Hands-On Demonstration
After the brief discussion, she instructed us to open our code editor. She guided us step-by-step as we created:

- A simple webpage layout
- Headings (<h1> to <h6>)
- Paragraphs (<p>)
- Images (<img>)
- Links (<a>)
- Lists (<ul> and <ol>)

She showed examples and gave us time to type the code on our own. Whenever someone had an error, she patiently helped by explaining what to fix.
Practical Activity
We were asked to create a mini webpage using everything we learned in the session. This allowed us to apply the concepts immediately. It was a good practice because it helped me better understand how HTML elements work together.
Q&A and Closing
Before ending the session, Ms. Verana answered questions from participants. She encouraged us to continue practicing HTML so we could build more advanced web pages in the future. The meeting ended around **8:00 PM**.

III. Knowledge / Learning Acquired

Throughout the activity, I learned:

1. The basic structure of an HTML file.
2. How to add text, images, and links to a webpage.
3. How to use headings and lists properly.
4. How each HTML tag has a specific purpose in webpage layout.
5. That consistent practice is important to become good at web development.

IV. Observation

The session was simple but very effective. Ms. Verana explained the concepts clearly and made sure everyone could follow along. Even though it was online, the hands-on approach kept the participants engaged. The instructions were easy to understand, and the pace of the lesson was manageable for beginners.

V. Recommendations/ Suggestions

For future HTML sessions, I suggest:

1. Adding a short quiz to test our understanding.
2. Giving more complex exercises for practice.
3. Providing sample web design templates for students to study.
4. Extending the session time so we can explore more HTML tags.
5. Including CSS basics to improve the design of our webpages.

VI. Certificate
